

## Metrohm Application Bulletins (English)

### Complete index

#### Key to methods:

<b>A</b> Potentiometry	<b>F</b> Karl Fischer Titration
<b>B</b> Polarography	<b>G</b> Polarized Electrodes
<b>C</b> Photometry	<b>H</b> Treatment of electrodes
<b>D</b> Coulometry	<b>I</b> Ion chromatography
<b>E</b> Conductometry	<b>K</b> Automation

Number	Title	Method(s)
283-E	Validation of Metrohm burets	A B F I
281-E	Validation of the 774 Oven Sample Processor in combination with a KF Coulometer using standard operation procedures	F
280-E	Automated Karl Fischer water determination with the 774 Oven Sample Processor	F
278-E	Validation of the 743 Metrohm Rancimat using Standard Operating Procedures	E
277-E	Validation of Metrohm ion chromatography systems using Standard Operating Procedures	I
276-E	Validation of Metrohm VA instruments using Standard Operating Procedures	B
275-E	Potentiometric two-phase titration of anionic surfactants in washing powders and liquid washing agents	A
273-E	Validation of Metrohm KF coulometers using Standard Operating Procedures	F
272-E	Validation of Metrohm conductometers	E
271-E	Validation of Metrohm pH meters using Standard Operating Procedures	A
269-E	Titrimetric/potentiometric determination of ionic surfactants by two-phase titration using the Metrosensor Surfctrodes	A
268-E	Potentiometric titration of surfactants and pharmaceutical compounds	A
266-E	Voltammetric determination of titanium and uranium	B
265-E	Hamilton PRP-X100 IC anion column (6.1005.000)	I
264-E	Titrimetric methods for the determination of betains	A
263-E	Titrimetric determination of pharmaceutical compounds with the NIO electrode	A
262-E	Phenomenex Star Ion A300 IC anion column (6.1005.100)	I
261-E	Metrosep Anion Dual 2 IC column (6.1006.100)	I
260-E	Metrosep Anion Dual 1 IC glass cartridge (6.1006.020)	I
257-E	Metrosep Cation 1-2 IC column (6.1010.000)	I
255-E	Validation of Metrohm KF titrators and KF ovens according to GLP/ISO 9001	F
254-E	Determination of zinc, cadmium, lead and copper by anodic stripping voltammetry using carbon electrodes	B
252-E	Validation of Metrohm titrators (potentiometric) according to GLP/ISO 9001	A F
251-E	Polarographic determination of cinchocaine (dibucaine) in pharmaceutical preparations	B

250-E	Polarographic determination of diazepam in body fluids and pharmaceutical preparations	B
249-E	Titrimetric determination of total and residual chlorine in drinking and process water	A
243-E	Determination of chromium at the «Ultra Trace» graphite electrode by cathodic stripping voltammetry	B
242-E	Determination of tungsten at the «Ultra Trace» graphite electrode by anodic stripping voltammetry	B
241-E	Determination of cadmium and lead at the «Ultra Trace» graphite electrode by anodic stripping voltammetry	B
237-E	Determination of the oxidative stability of cereals, cookies and biscuits	E
235-E	Potentiometric titration of calcium (magnesium) in dairy products	A
233-E	Titrimetric/potentiometric determination of anionic and cationic surfactants	A
232-E	Determination of the antioxidant activity according to the Rancimat method	E
231-E	Voltammetric determination of zinc, cadmium, lead, copper, thallium, nickel and cobalt in water samples according to DIN 38406 Part 16	B
230-E	Titrimetric/potentiometric determination of non-ionic surfactants based on polyoxyethylene adducts using the NIO electrode	A
228-E	Diazotization titrations	A G
226-E	Determination of arsenic by anodic stripping voltammetry at the rotating gold electrode	B
225-E	Simple wine analysis with the Titrino	A G
224-E	Polarographic determination of pyridoxine (vitamin B6)	B
221-E	Standard methods in water analysis – use of Metrohm instruments	A B E G I K
220-E	Voltammetric determination of platinum and rhodium in the ultratrace range	B
219-E	Polarographic determination of riboflavin (vitamin B2)	B
218-E	Polarographic determination of thiamin (vitamin B1)	B
215-E	Polarographic determination of folic acid (vitamin B9, vitamin BC)	B
213-E	Polarographic determination of nicotinamide	B
211-E	Sample preparation for ion chromatography	I
209-E	Coulometric water determination according to Karl Fischer in insulating oils as well as in hydrocarbons and their derivatives	D F
207-E	Stripping voltammetric determination of silver	B
206-E	Titer determination in potentiometry	A
205-E	Determination of the thermal stability of PVC and related copolymers	E
204-E	Oxidative stability of oils and fats – Rancimat method	E
200-E	Determination of the acid number, hydroxyl number and isocyanates in raw materials for the fabrication of plastics by automatic potentiometric titration	A
199-E	Polarographic determination of sulfide and sulfite	B
196-E	Polarographic determination of formaldehyde	B
195-E	Titrimetric determination of free boric acid and tetrafluoroboric acid in nickel	A

	plating baths	
192-E	Determination of thiourea in the lower ppm and ppb range by polarography and stripping voltammetry	B
191-E	Simultaneous polarographic determination of cystine and cysteine	B
190-E	Polarographic determination of 4-carboxybenzaldehyde in terephthalic acid	B
188-E	pH measurement technique	A
186-E	Determination of aluminum in water samples by adsorptive voltammetry	B
182-E	Potentiometric analysis of photographic baths	A
181-E	Potentiometric titration of aluminum and magnesium in the same solution	A
180-E	Automatic determination of the formol number in fruit and vegetable juices	A
179-E	Polarographic determination of maleic and fumaric acid alone or in mixtures	B
177-E	Automatic determination of the bromine index and/or the bromine number in petroleum products	G
176-E	Simultaneous determination of lead and tin by anodic stripping voltammetry	B
154-E	Ion chromatographic determination of chloride, nitrite, nitrate, phosphate, sulfate and thiocyanate in saliva	I
147-E	Simultaneous trace determination of seven metals in «electronic grade» materials using stripping voltammetry	B
146-E	Direct polarographic determination of trace amounts of molybdenum in water	B
145-E	Determination of low water contents in plastics using the KF oven method	F
143-E	Potentiometric determination of nitrilotriacetic acid (NTA) and/or ethylenediaminetetraacetic acid (EDTA) in washing agents	A
142-E	Karl Fischer water determination in gases	F
141-E	Analysis of edible fats and oils	A B E F
140-E	Titrimetric determination of sulfate	A C
139-E	Simple wine analysis	A G
137-E	Karl Fischer water determination with the KF coulometer	D F
136-E	Polarographic determination of styrene in polystyrene and copolymers	B
135-E	Potentiometric determination of hydrogen sulfide, carbonyl sulfide and mercaptans in petroleum products	A
133-E	Determination of ammonium with the ion-selective electrode	A
132-E	Polarographic determination of molybdenum in strongly ferruginous materials	B
131-E	Voltammetric determination of aluminum	B
130-E	Chloride titrations with potentiometric indication	A
129-E	Potentiometric determination of orthophosphates, metaphosphates and polyphosphates	A
128-E	Electrochemical detection in HPLC	G
127-E	Polarographic determination of nitrite in water samples, meat and sausages	B
126-E	Polarographic determination of quinine	B
125-E	Simultaneous determination of calcium and magnesium in water samples and beverages and the different types of water hardness by complexometric titration	A

	with potentiometric indication	
123-E	Voltammetric determination of iron and manganese in water samples	B
119-E	Potentiometric determination of trace bromide and iodide in chlorides	A
117-E	Determination of selenium by stripping voltammetry	B
116-E	Polarographic/voltammetric determination of chromium in small quantities	B
114-E	Polarographic determination of five metals (copper, cobalt, nickel, zinc and iron) in a single operation	B
113-E	Determination of lead, cadmium and copper in foodstuffs, waste water and sewage sludge by anodic stripping voltammetry after digestion	B
112-E	Quantitative determination of metals precipitated by potassium hexacyanoferrate(II) in wine («décassage» of wine)	G
110-E	Polarographic determination of free cyanide	B
109-E	Karl Fischer water determination with the KF drying oven	F
105-E	Determination of lead and cadmium released from crockery and glassware	B
102-E	Conductometry	E
101-E	Complexometric titrations with the Cu ISE	A
100-E	Bi-amperometric determination of potassium and/or ammonium	G
098-E	Determination of ascorbic acid (vitamin C) and its compounds	B C G
097-E	Voltammetric determination of tocopherols (vitamin E) in edible oils and fats	B
096-E	Determination of mercury by stripping voltammetry	B
094-E	Potentiometric and photometric analysis of honey	A C
093-E	Potentiometric analysis of cadmium plating baths	A
092-E	Potentiometric analysis of lead plating baths	A
091-E	Potentiometric analysis of brass and bronze plating baths	A
090-E	Potentiometric analysis of tin plating baths	A
089-E	Potentiometric analysis of anodizing baths	A
087-E	Analysis of dairy products	A C G
086-E	Measuring the pH value of dairy products	A
085-E	Analysis of jams, fruit and vegetable juices and their concentrates	A B C
084-E	Titrimetric analysis of vinegar	A G
083-E	Determination of sodium with the ion-selective electrode	A
082-E	Determination of fluoride with the ion-selective electrode	A
080-E	Determination of the acid and base number in petroleum products	A
076-E	Polarographic determination of nitrilotriacetic acid (NTA) and ethylenediaminetetraacetic acid (EDTA) according to DIN 38413 part 5	B
074-E	Polarographic and stripping voltammetric analysis methods for thallium, antimony, bismuth and iron (copper, vanadium)	B
073-E	Polarographic analysis – half-wave potentials of organic substances	B
072-E	Potentiometric determination of mercury or silver in the presence of halides	A

071-E	Determining the pH value and redox potential in soil samples	A
070-E	Polarographic determination of nitrate in water samples, soil and plant extracts, vegetable juices, meat and sausages, fertilizers, liquid manure, etc.	B
069-E	Titrimetric methods for the chemical analysis of pasta	A F
068-E	Potentiometric determination of carboxyl and amino end groups in polyamide fibers	A
066-E	Potentiometric determination of boric acid	A
064-E	Platinization of platinum electrodes and conductivity measuring cells	H
063-E	Determination of silicon, calcium, magnesium, iron and aluminum in cements by photometric titration of the solubilized product	C
061-E	Potentiometric determination of silver	A
060-E	Polarographic determination of fructose	B
057-E	Polarographic determination of nicotine	B
053-E	Determination of ammonium or Kjeldahl nitrogen	A D
052-E	Cerimetry	A G
050-E	Determination of lead in petroleum products by stripping voltammetry	B
049-E	Colorimetric determination of copper	C
048-E	Checking the condition of platinum and gold electrodes used for redox potential measurements	H
046-E	Potentiometric determination of cyanide	A
045-E	Colorimetric determination of silicic acid	C
044-E	Colorimetric determination of boron	C
042-E	Determination of water-soluble carbonyl compounds by potentiometric titration	A
040-E	Determining the pH value of paper	A
039-E	Potentiometric determination of nitrating acid	A
037-E	Determination of chromium in iron and steel	B G
036-E	Polarographic analysis – half-wave potentials of inorganic substances	B
033-E	Determination of the total, calcium and magnesium hardness of water samples by photometric titration	C
030-E	Photometric determination of chromium(VI)	C
029-E	Determination of chlorine in water with the 662 Photometer	C
027-E	Potentiometric titration of chloride and bromide in the presence of each other	A
025-E	Coatings on silver electrodes	H
024-E	Potentiometric determination of aluminum	A
018-E	Simultaneous determination of gold and copper in electroplating baths and/or alloys by potentiometric titration	A
017-E	Potentiometric titration of calcium carbonate in raw meal from the cement industry	A
016-E	Routine determination of copper in brass, bronze, German silver and in electroplating baths	A
014-E	Determination of nickel by potentiometric titration	A

011-E	Determination of zinc by bi-amperometric titration with potassium hexacyanoferrate(II)	G
008-E	Potentiometric titration of hypochlorite, chloride and chlorate in mixtures	A
004-E	Bi-amperometric titration method for the determination of antimony in lead	G
